

I came across this journal recently. Looking at the dates, it must have been made by a fellow time traveler! This traveler seems to have enjoyed changing history, and he must have crossed his own path more than once with all these trips...

Year	Entry
4450 BC	I've got it! I need to find Dr. Henry Ravenwood, a famous epidemiologist. Time to go back to the future.
2580 BC	Back to Egypt, tried to remember my hieroglyphs and learned to speak ancient Egyptian from some scribes. They were so impressed they brought me to meet the pharaoh, Khufu. I gave him the gold I borrowed as a gift, maybe he'll build something memorable with it.
2545 BC	It took a lot of work but I got the heavy lifters underneath just one of the Great Pyramids. If my calculations are correct, this means I can take one of them with me this time.
1347	Marseilles, France. Machine definitely works, but everyone is sick here. I think the cause translates to "Great Pestilence". This may not have been a good time to visit. Heard some scurrying in the time machine as I left.
1965	Visited Princeton University, decided to sit in on some courses on Egyptian hieroglyphs and chemistry, gave me some ideas for using duct tape to convert carbon dioxide to oxygen. Also took this opportunity to steal Ravenwood's plane ticket, now he'll have to take a boat.
1969	Note to self: Machine needs to cool down after trips across more than 5000 years. Went to the library in the meantime, found out Ravenwood is dead, his plane crashed over the Pacific a few years ago.
1973	New York City, Empire State Building bigger than I imagined it would be. Figured I would set up some timelapse photographs of Times Square and let them expose for a few years. A rat wandered out of the machine when I got here, I tried to catch it but lost it in the crowd. I figure it couldn't do much harm to the timeline, it's called the Butterfly Effect, not the Rat Effect, right?
1979	New York City again to check on my photographs. The entire place is abandoned, posters all over about quarantine and a worldwide plague epidemic. A look at my instruments tells me that the entire planet is uninhabited. Not sure how to fix this, I'm going as far back in time as this machine can to think.
1985	The time machine is complete, now all that's left is to test it.
2008	Giza, Egypt. Watched the sun set behind the Great Pyramids. Decided I should get a souvenir this time so I bought a silver ring from a street vendor.
2009	Visited Giza, Egypt. Not many other tourists here, probably because there's not a single thing here to see. Why did I come here in the first place? It isn't even one of the Six Wonders of the Ancient World.
2025	My plan worked, it's nice to see people in the future again. The NASA team likes my design for a cheap CO ₂ to O ₂ converter, they say they'll use it in some of their first manned Mars missions. I think I'll go to Egypt next, I've never been to Egypt.
2180	Watched the sun rise by the Great Pyramid on Mars. The casing stones on the outside glimmer in the red sunlight, as though the thing were finished just a few years ago. I take a deep breath of the fresh air and finish off the rest of my lemonade.
2186	Victoria City, Mars. They're still constructing the larger buildings so I borrowed some of their heavy lifting equipment. I doubt they'll miss it. Lost my ring somewhere on the way.
2252	Took a transport to the mining colony on asteroid Deneva IV. With the help of some friends I "borrowed" a relatively small portion of their gold reserves. It's the 23rd century, people don't care about gold anyway.
